

## ALI-STARTER PLUS

### General features

Ali - Starter Plus is a formulation with a balanced composition whose addition to musts brings an adequate availability of nutrients and growth factors, necessary for yeasts for their activity and to avoid stuck fermentation or hydrogen sulfide production.

Autolysate-very rich in vitamins and amino acids-provides the yeast with a rich supply of nutrients, which are essential to promote and enhance the flavor profile.

Dibasic ammonium phosphate (DAP) provides readily assimilable nitrogen rapidly, restoring APA (readily assimilable nitrogen) to optimal levels and warding off fermentation arrest and sensory defects.

Ali - Starter Plus also contains Vitamin B1, an essential constituent of coenzymes involved in yeast metabolic reactions.

The yeast peel fraction completes the nutritional compartment and helps the cellulose absorb any inhibitors of fermentation itself.

It does not contain ammonium sulfate, so it does not contribute to increased sulfates.

### Composition

Yeast autolysate

Dibasic ammonium phosphate

Yeast peel

Cellulose

Thiamine

### Dosage

30-40 g/hl

**Warning:** 30 g/hl of Ali - Starter Plus provides 45 mg/hl thiamine (legal maximum limit: 60 mg/hl) and about 45 mg/l APA (readily assimilable nitrogen).

### Packaging and storage

2.5 kg and 10 kg polybags.

Store in a cool, dry place and away from light or heat sources.
