ANTIOX BREW

STABILIZING AGENTS

General features

Antiox-Brew is a stabiliser specifically designed for the brewing industry, developed to significantly reduce the oxygen content in the final product and improve overall beer stability.
Compared to the use of ascorbic acid alone, it helps prevent oxidative phenomena linked to its possible conversion into dehydroascorbic acid in aerobic conditions.
The main benefits of Antiox-Brew include:

- Oxidation protection: preserves the sensory characteristics and colour of the beer, improving its stability over time
- Synergistic action: potassium metabisulphite works in combination with ascorbic acid without significant sensory impact, ensuring effective oxygen protection
- High solubility: guarantees uniform distribution throughout the product for consistent and homogeneous action

Antiox-Brew is an effective solution for preserving beer freshness and quality, limiting oxidative reactions and ensuring long-term stability without altering the sensory profile.

Beer

Composition

Potassium metabisulfite
Ascorbic acid

Dosage

2–4 g/hl.
Warning: Antiox-Brew adds 0.25 mg/l of SO_2 per gram of product.

How to use

Add to the mixture to be treated.

Packaging and storage

1 kg bag.
Store in a cool, dry place, away from heat sources.
